

Picture Gallery 2007 from <http://www.hfsjg.ch>

January: The best view of the fog is from the top of Europe.

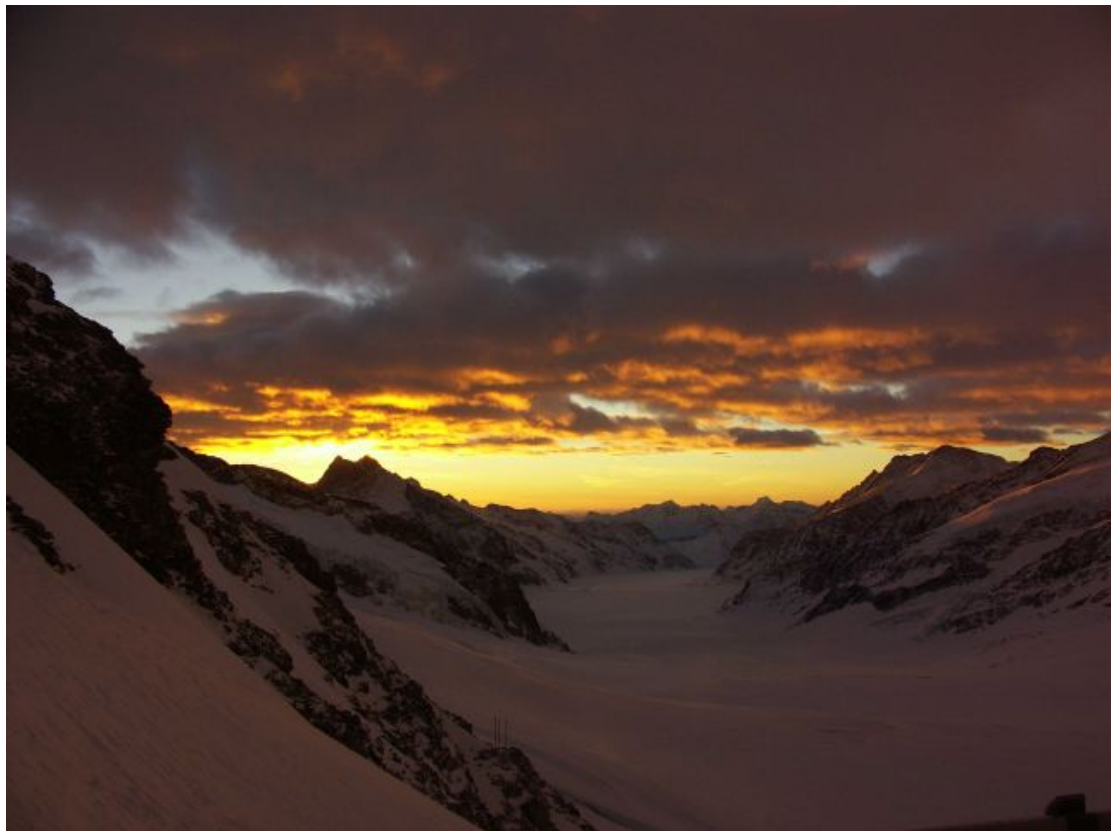

February: CLACE 6 (CLOUD and Aerosol Characterization Experiment) at Jungfraujoch. Crates of equipment from one of the research groups.

March: CLACE 6 (CLoud and Aerosol Characterization Experiment) at Jungfrau-joch. Cloud Particle Imager (CPI) and Forward Scattering Spectrometer Probe (FSSP) firmly installed on the Sphinx platform to withstand a snowstorm.

April: The Sphinx coming into view through the clouds.

May: Spring sunrise over the Aletsch glacier.

June: Thunderstorm.

July: The annual snow removal work at the Research Station Jungfrauoch by a team of mountain guides.

August:
A permanent
resident at
Jungfrauoch.

September:
Snow sampling at
Jungfrauoch for Paul
Scherrer Institute's
investigation of the
behavior of mercury
in snow.

October: Observatory Gornergrat South with the KOSMA radiotelescope of the Universität zu Köln at Kulmhotel Gornergrat. This year marks the 100th anniversary of the Kulmhotel Gornergrat.

November: Snapshot from a medical experiment carried out in October by the Centre Hospitalier Universitaire Vaudois CHUV Lausanne and the University Hospital, Berne, at the research station Jungfraujoch.

December: Mass balance measurements on Jungfraufirn using a firn-drill to determine the density in the annual layer.
