

Name of research institute or organization:

Société Astronomique de Liège (SAL)

Title of project:

Observing the sky and describing the objects

Project leader and team:

Benoît Lempereur

Project description:

The project consists of observing the sky in better conditions (less light pollution and a thinner atmosphere at Jungfrauoch) and describing different objects in the sky. These observations will produce a description of what is seen through amateur telescopes. This data will be presented during the observation evenings for schools, but also to a wider public audience to allow them to discover the beauty of the sky at night.

Key words:

Observing, descriptions

Scientific publications and public outreach 2011:

Magazine and Newspapers articles

Le Ciel – November 2011

Jupiter and the Galilean satellites

All photographs are made with only a camera on my telescope without guiding, and the exposure time is < 60 seconds.
